

How to tell if my adapter/plug is affected?

Compare your adapter to the images below. An affected wall plug adapter has 4 or 5 characters or no characters on the inside slot where it attaches to an Apple power adapter. Redesigned adapters (that are not affected) have a 3-letter regional code in the slot (EUR, KOR, AUS, ARG or BRA).

Affected Adapter Prong Types

			
Round thin pins, slightly slanted inward	Round thick pins	Flat angled blades	Round thin pins
Continental Europe	Korea	Australia New Zealand Argentina	Brazil

If your daughter has one of the affected plugs/adapters for their iPod, iPad, iPhone or MacBook laptop then please contact your local **Authorised Apple Service Centre** or **Apple shop** for an instant replacement.
